

**IN THE SPECIFICATION**

Please replace the following paragraphs as follows:

✓  
Page 13 of 39, line 10: --FIG. 6 is a side view of a light ~~light~~ emitting diode (LED).--

✓  
Page 14 of 39, line 16-17: --FIG. 29 is a view of the power source frame of FIG. 28 along line 29-29 ~~2929~~ showing a magnet and magnet cavity in dotted lines.--

Please amend the first paragraph beginning on page 16 of 39, line 1, as shown below:

91  
--As depicted in Figure 3, the power source frame 22 may also include an area 32 adapted to receive a weight. In the embodiment shown in the figures, although not required, the area 32 is a throughhole extending from the first side 22 of the frame to the second side 33 of the frame. Area 32 is tapered at a slight angle to allow the weight to be friction fit within area 32. The power ~~source~~ frame source frame 22 is further provided with a plurality of pegholes 100 positioned about an outer periphery of the first side 26 of the power source frame. The pegholes 100 are adapted to receive a corresponding set of pegs located on the power source frame housing 14. The mating of the pegs with the pegholes

CA  
cmd.  
positions the power source frame housing 14 in proper alignment with the power source frame 22. The power source frame housing may be ultrasonically welded to the power source frame and/or glued thereto. Thus, there is no need to use threaded screws or other fastening means to hold the frame and the housing together. As a result, the flashlight of the invention is assembled without difficulty.--
